

**Table 3:** Relationship between *M. pneumoniae* respiratory tract infections and meteorological factors.

Meteorological factors	Mean±SD	Correlation coefficient $r_s$	P value *
mean temperature ( $^{\circ}\text{C}$ )	16.7±8.7	0.42795	0.0006
relative humidity (%)	68.9±4.8	0.116	0.3742
total rainfall monthly (mm)	85.7±57.7	0.148	0.258
total sunshine monthly (h)	142.2±51.9	0.1717	0.1894
mean wind velocity (m/s)	1.9±0.4	0.2269	0.0812

\*  $p < 0.05$  was considered statistically significant.

SD: standard deviation.
