

**Table 4:** Bivariate correlations of the Zuckerman-Kuhlman Personality Questionnaire (ZKPQ) scales with hostility features as measured by the Hostility and Direction of Hostility Questionnaire (HDHQ) in the entire sample ( $N=1,462$ )

<b>Independent Variables</b>	<b>Total Hostility</b>	<b>Extraverted Hostility</b>	<b>Introverted Hostility</b>	<b>Acting out Hostility</b>	<b>Criticism of others</b>	<b>Delusional Hostility</b>	<b>Self-criticism</b>	<b>Delusional Guilt</b>
Impulsive Sensation Seeking	0.148***	.437***	.272***	.418***	.133***	.039	.095**	.209***
Sociability	-0.076*	-.068*	-.116***	-.090**	-.038	-.027	-.045	-.195***
Neuroticism-Anxiety	0.407***	.377***	.669***	.394***	.276***	.248***	.650***	.586***
Activity	0.070*	.137***	-.172***	.074*	.102**	.150***	-.074*	-.123***
Aggression-Hostility	0.626***	.453***	.221***	.504***	.383***	.409***	.219***	.202***

Values shown are Pearson's correlation coefficients; \*\*\*  $p < 0.001$ , \*\*  $p < 0.01$ , \*  $p < 0.05$ .
