

Table 1: Comparison of different type of vascular access, age and mortality, between incident and non-incident patients in 2009.

	191 incident patient	1266 non-incident patients	p
age	61.1 ± 13.2	58.4 ± 13.1	0.0087
died	32 (16.7%)	132 (10.4%)	0.009
AVF	132 (69.1%)	1,160 (92.3%)	<0.001
CVC	59 (30.9%)	94 (7.5%)	<0.001
graft	0 (0.0%)	3 (0.2%)	<0.001

AVF: arteriovenous fistula, CVC: central venous catheter.
