

Table 1: Allelic and genotype frequencies of Q192R and M55L Paraoxonase-1 polymorphisms in the three groups of the study. Group 1: 27 patients with diabetes mellitus and dyslipidemia, Group 2: 24 patients with dyslipidemia alone and Group 3: 28 healthy controls.

	Group 1 n=27	Group 2 n=24	Group 3 n=28
Q192R			
QQ	13 (48.1)	15 (62.5)	13 (46.4)
QR	12 (44.4)	8 (33.3)	13 (46.4)
RR	2 (7.4)	1 (4.2)	2 (7.1)
R		$\chi^2 = 0.519$ (p =0.470)	
M55L			
MM	6 (22.2)	8 (33.3)	3 (10.7)
ML	13 (48.1)	5 (20.8)	15 (53.6)
LL	8 (29.6)	11 (45.8)	10 (35.7)
L		$\chi^2 = 2.998$ (p =0.084)	

n: number, values represent number of patients and percentage in brackets (%).
