

Table 1: Demographics of women treated by the two colposcopists with a single large loop excision of the transformation zone (LLETZ) cervical treatment between 2017-2018.

	Colposcopist A (n =60)	Colposcopist B (n =18)	p-values
Age at treatment, mean (SD)	36.5 (8.9)	33.2 (10.9)	0.195 ^a
Smoking			
No	36 (69.2)	12 (66.7)	0.840 ^b
Yes	16 (30.8)	6 (33.3)	
Parity			
0	12 (20.7)	6 (40)	0.230 ^c
1	18 (31)	2 (13.3)	
≥2	28 (48.3)	7 (46.7)	

Values represent number of patients (with percentage in brackets) unless stated otherwise, ^a: Student's t-test, ^b: chi-square test, ^c: Fisher's exact test, SD: standard deviation, Numbers are provided based on available data. Eight women did not declare their smoking status and two women did not declare their parity status in the group of women treated by colposcopist A. Similarly, three women did not declare their parity status in the group of women treated by colposcopist B.
