

Table 2 : Mean scores of the Covid-19-related questions of the 65 patients with epilepsy who comprised this study's sample.

Questions	mean \pm SD	range	95% Confidence Interval	
			mean \pm SD	range
Fear of getting infected	6.1 \pm 2.7	2 - 10	6.1 \pm 0.3	5.3 - 6.7
Fear of death	4.7 \pm 3.3	0 - 10	4.7 \pm 0.4	3.9 - 5.5
Fear of sickness for their relatives	7.1 \pm 2.7	2 - 10	7.1 \pm 0.3	6.4 - 7.7
Stress during lockdown	6.4 \pm 3.1	0 - 8	6.4 \pm 0.4	5.6 - 7.1
Fear of AED unavailability	3.0 \pm 2.9	0 - 10	3.0 \pm 0.4	2.3 - 3.7

The mean scores indicate that the level of fear of getting infected from Covid-19 themselves or their relatives and stress during lockdown was moderate, and the level of fear of death or AED unavailability was mild. The questions' score range was 0-10.

CI: Confidence Interval, SD: Standard Deviation, AED: Antiepileptic drugs.
