

Table 2: Comparison of bleeding in the operating room and bleeding (drainage) in the intensive care unit between the case and control groups, which included randomly allocated patients undergoing coronary artery bypass grafting surgery.

	Controls	Case	p-value
Bleeding volume in the operating room (ml)	1176.9 \pm 434.7	1072.6 \pm 337.4	0.33
Bleeding (drainage) volume in ICU (ml)	602.8 \pm 310.2	329.6 \pm 208.9	0.001

Values are presented as means \pm standard deviation. A p-value <0.05 is considered statistically significant. ICU: intensive care unit.
